

ENgrid Iframe Lightbox

This project allow you to embed a [ENgrid](#) Donation Page Iframe in a lightbox on your website.

How to use

Add the script below to your website.

```
<script
  defer="defer"
  src="{URL}/engrid-iframe-lightbox.js"
  data-engrid-url="https://give.oxfamamerica.org/page/35383/donate/1?
mode=DEMO"
  data-engrid-overlay-bgcolor="#667eea"
  data-engrid-content-bgcolor="#ffffff"
  data-engrid-trigger="5"
  data-engrid-max-width="650px"
></script>
```

Options:

- **data-engrid-url:** The URL of the ENgrid Donation Page Iframe you want to embed **(required)**
- **data-engrid-overlay-bgcolor:** The background color of the overlay (default: #000000).
- **data-engrid-content-bgcolor:** The background color of the content (default: #ffffff).
- **data-engrid-max-width:** The maximum width of the content (default: 800px).
- **data-engrid-trigger:** Control how the lightbox is triggered for the user browsing the page. See Trigger Options below (default: 0).

Trigger Options

- **Any Number** (example: 2): Any numeric value will cause the lightbox to show that number of seconds after the page has finished loading.
- **Pixels** (example: 1000px): Using a number postfixed with px (for pixels) will cause the lightbox to not show until the user has scrolled at least that number of pixels down the page.
- **Percentage** (example: 40%): Using a number postfixed with % (for percentage) will cause the lightbox to not show until the user has scrolled at least that percentage of the page.
- **Exit** (example: exit): The exit option is great for only showing the lightbox once the user moves their mouse up and out of the page to browse away.

Change the data attributes with the information you need.

Example of implementation via Google Tag Manager

```
window.addEventListener("load", function () {
  var script = document.createElement("script");
  script.src = "{URL}/engrid-iframe-lightbox.js";
```

```
script.dataset.engridUrl =  
  "https://give.oxfamamerica.org/page/35383/donate/1?mode=DEMO";  
document.querySelector("head").appendChild(script);  
});
```

Development

Your js code must be on the `src/app` folder. Styling changes must be on `src/scss/main.scss`.

Install Dependencies

1. `npm install`

Deploy

1. `npm run build` - Builds the project
2. `npm run watch` - Watch for changes and rebuilds the project

It will create a `dist` folder, where you can get the `engrid-iframe-lightbox.js` file and publish it.
